

Assessment Brief- Assessment 1-

Front-end development

Unit Code/Description	ICT308 – Capstone Project 2
Course/Subject	BIT
Semester	2026- S1
Unit Learning Outcomes Addressed	ULO 1, ULO 2, ULO 3, ULO 4.
Assessment Objective	This assessment aims to document and present the front-end design of the proposed IT system. It also outlines the development process undertaken during the creation of the front-end. A functional demonstration will support the design and development description.
Assessment Title/Type	Assessment 1: Front-end development
Due Date	Report should be submitted online in Moodle by one member of the team ONLY (Group Leader) on Sunday Week 5, before 11:59PM. Present for 15 minutes as a group during the class time in week 5
Weighting	30 Marks (Report 20 Marks, Presentation 10 marks)
Instructions to Students	Check section Assessment Description
Format/Structure	The report must be a word document
Word/Page limit	2000 words Report
Referencing Style	American Psychological Association (APA) Referencing Style
Submission Guidelines	Your name, student ID and group number must appear at the beginning of your report. This assessment must be submitted to Turnitin. Login to your Turnitin account, locate and click on the assignment submission link, carefully review the instructions, and then submit your assessment.
Plagiarism and Academic Integrity	At CIHE, we take academic integrity seriously and expect all students to maintain the highest standards of honesty and ethical behaviour in their academic work. As a student, it is your responsibility to ensure that all your academic endeavors are conducted with integrity and in accordance with the principles of honesty, fairness, and respect for intellectual property. Please refer to “CIHE Student Academic Integrity and Honesty Policy” in the Moodle for details.
Late Submission Policy	Requests for extensions will be granted only for exceptional circumstances that are supported by credible evidence. Duration of the extension period is only one week. Late submissions are subject to 10% reduction in marks for each day of delay. Submissions after the extended date will not be marked.
Academic Integrity and AI use Requirements	Students may use AI tools for: - brainstorming project topic options - exploring possible solution ideas and system features - debugging and troubleshooting code errors AI use must be acknowledged. Core implementation, integration, iteration progress, testing evidence, and final running system must be produced and demonstrated by the team.

ASSESSMENT DESCRIPTION:

This assessment has the following two parts:

- Part 1 – Design Documentation of the front-end of your proposed IT system.
- Part 2 – Description of development process and demonstration of the front-end of your proposed IT system.

The two parts of the assessment listed above are described in the following sections.

Part 1 – Design Documentation of the front-end of your proposed IT system

In the Design Documentation, add a heading called Iteration 1, then write a brief summary of what design documentation you are doing for iteration 1.

You **must** do your design documentation before you start developing, and at the end of the iteration, your design documentation **must** match your project.

Design documentation should include the following aspects:

1. **Business rules:** who can access your proposed system (such as the website) and what are the activities such users can perform in the proposed system, e.g. a customer can browse the products through 'search' in an eCommerce website. Your expressions of business rules should be consistent with Project 1 assessment 3.
2. **Project Management:** This section focuses on the management and coordination of the project, ensuring smooth collaboration within the team. Every team member's role and contribution in the iteration 1, you should clarify about Team Roles and Responsibilities, Time management and Task management using [Jira](#).
3. **Visual elements:** used in the front-end of the proposed system: You can describe the typography, colours, font sizes and layout of the front-end. If you are developing a website, all pages' visual elements should be addressed. If you use development tools for website such as GoDaddy, WordPress, please specify the themes used and describe the change you made during iteration 1.
4. **Database:** specify all the business data entities required to support the transactions on your system. If your system uses MongoDB for a website, you only need to present 1

table, but your website uses SQL, you need to present multiple tables with relationships.

Part 2 – Description of development process and demonstration of the front-end of your proposed IT system.

For Part 2, the usable piece of the product front end you develop in the iteration is assessed. You are required to do the following:

- Write a brief description of what development and hosting service are used in your project (such as GoDaddy, WordPress) and describe what the theme/templates were adopted and identify where you got them from. **If your team develops a mobile app or desktop software, you need to describe the development tools and environment for the front-end development.**

Describe what changes have been made by your team to customize such themes used in your project.

Presentation: You must present 15 minutes as a group during the class time in week 5

ASSESSMENT SUBMISSION:

This is a group activity and students are required to work with their respective group members. No individual submission will be accepted. You have to nominate someone as your group leader to coordinate the assignment submission.

- **The 2000 words report should be submitted online in Moodle by one member of the team ONLY (Group Leader) on Sunday Week 5.**
- **You need to present for 15 minutes as a group during the class time in week 5 and all team-members must present. The presentation will be immediately followed by Q&A session.**

You will not receive any marks for this assignment if your group members collectively report against you for non-participation or non-cooperation.

Cover Sheet Requirement

All groups must **download, complete, and attach the CIHE Assessment Cover Sheet from Moodle** when submitting this assessment.

The cover sheet includes:

- Team member details and contribution percentages
- Responsibilities for the project
- The Academic Integrity Declaration
- The AI/Tool Use Declaration Table

Submissions without the completed cover sheet are not accepted.

Use of AI Tools (GenAI)

Students may use AI tools for:

- brainstorming project topic options
- exploring possible solution ideas and system features
- debugging and troubleshooting code errors

AI use must be acknowledged.

Core implementation, integration, iteration progress, testing evidence, and final running system must be produced and demonstrated by the team.

AI must not be used to write the report or create presentation slides.

Marking rubric: 25 Mark:

Criteria	Poor	Fair	Good	Very Good	Excellent
Clarity and Consistency of Business Rules (5 marks)	Business rules are unclear, inconsistent, or missing key elements.	Basic business rules are outlined but may lack detail or consistency.	Business rules are clear and consistent, but some minor details are missing.	Business rules are detailed, consistent, and mostly align with Capstone Project 1.	Comprehensive and well-documented business rules, fully consistent with Capstone Project 1.
Project Management (5 marks)	Team roles, task management, and timelines are unclear or missing. Jira is not used.	Basic roles, timelines, and task management are described, but lack detail or depth.	Team roles, time management, and task organization are clearly documented with Jira usage.	Detailed and well-organized project management with clear roles, timelines, and effective use of Jira for task tracking.	Comprehensive and professional project management, with precise roles, timelines, and advanced Jira implementation reflecting excellent collaboration.
Design and Description of Visual Elements (5 marks)	Minimal or no description of visual elements; lacks relevance to the project.	Basic description of visual elements; some aspects may be incomplete or generic.	Clear and relevant description of visual elements, covering most required aspects.	Detailed and professional description of visual elements, with good attention to detail.	Outstanding and highly detailed description of visual elements, demonstrating creativity and precision.
Database Design (5 marks)	Missing or incomplete database design with little relevance to the project.	Basic database design provided but lacks depth or detail.	Clear and relevant database design, covering the necessary business entities.	Detailed and well-structured database design, with clear relevance to the project.	Exceptionally detailed, accurate, and innovative database design, fully aligned with project needs.
Presentation & Demo (10 marks)	No or poor-quality presentation; lacks explanation.	Basic presentation, unclear or missing key details.	Clear demonstration but missing some explanations.	Engaging and well-structured presentation with strong explanations.	High-quality, well-presented, and professional demo covering all aspects.
